

Marketing Opening Letter H&W-Practise

Our solution anyone can use today.

Ideal for Medical & Wellness Clinics patients & clients, coined:
“Epigenology Clinic” Helping people live a healthier life.

Subject: We’ve modified, advanced and computerized the Royal College of Physicians and Surgeons of Canada’s Geriatric Hand & Wrist-Assessment.

It’s not for Geriatrics any more but can now be used as a “**Preemptive Health Care Service**” (PHC-Service) for the general public.

We are working with Health Canada as a by-yearly assessment replacing the now canceled yearly physical. Necessary before any Hospital visit and/or prior to seeing a Medical practitioner including wellness clinics. A new Epigenetic comparison diagnostic technology allows medical pros to discover what really ails their clients/patients for a more efficient service.

Any delays could easily jeopardize one's life.
It saved the author/Developer's life, how about yours!

Book for a Non-invasive **Hand & Wrist-Assessment** with a Registered Licensed Epigenologist Hand & Wrist Practitioner today, before its too late. **go to our Website** (www.epigenologyclinic.com)... and select the "**Contact US**" page.

Epigenology H&W-Practice

Can be defined as a new "Preemptive Health Care Services" (**PHC-Services**) created as diagnostic Hand & Wrist comparison diagnostic tool. In the past the **Geriatric H&W-Assessment** was used by Medical Doctors as a format to diagnose retired people for specific ailments and diseases, to name a few. Because of Epigenetics R&D in medical institutions, globally, it's now understood it affects the Hands & Wrists (End Effectors) first when it comes to medical ailments, etc. As such this new **Epigenology H&W-Practice** allows Medical Doctors to use it as a comparison diagnostic tool.

But in North America, for lack of Doctors, the **Geriatric H&W-Assessment** procedure was shelved. Hence ZioTECH's new **Epigenology H&W-Practice** Preemptive Health Care Service has been reengineered as a go between for the **Medical Pros** and Home Based Businesses to service the public on behalf of the Medical Doctors. As a direct results it allows the **Medical Pros** and **HB Businesses** to perform **H&W-Exams** via requisitions from Medical Doctors or for their own patient's benefits. The cool part is that the **Epigenologist H&W-Practitioner** doesn't have to acquire a medical degrees to perform a **Geriatric H&W-Assessments** but it does help with their exam skill sets for proficiency. It's ZioTECH Inc's head office computer Database that scans the exam worksheets generating reports that also controls an enumerable amount of variations too complex for any mind. The end results is a medical comparison diagnostic report for the Medical Doctors and the medical community in general. Including allowing home based business to service the public as a new "Preemptive Health Care Services." Plus it's so incredibly easy to use as a Preemptive Health Care Service ZioTECH Inc is hoping one day it will replace the canceled yearly physical.

A new concept that allows Medical pros and home based Epigenology Clinics to work with the **Physicians and Surgeons of Canada's** Doctors to reduce unnecessary Hospital visit and help speed up medical Doctors Diagnostic backlogs. Diagnosing illnesses and diseases via a sophisticated computerized **non-invasive Hand & Wrist** examination.

The non-invasive unbiased **Symptomatic Hand & Wrist examinations** is demonstrating to be very practical and effective with incredible medical detail, and supported by ongoing research from prestigious Universities all over the world, such as: University of California at Berkeley, Liverpool University and the London Health Sciences Centre in the U.K. to name a few.

To request a **Epigenology Clinic Hand & Wrist Practice** “White Paper” and more information from the developers & author... must come from serious enquiries only. I look forward to discussing the opportunity in detail with any interested person.

Adding an Epigenology Clinic H&W Practice to any medical professionals services (Chiropractors and others) would bridge the gap between a Medical professional services and Royal College of Physicians and Surgeons of Canada’s, that would:

1. Complement existing Physicians and Surgeons as a comparison diagnostic tool used for the general public.
2. Generate sophisticated medical reports via a Computer DB compatible to a Medical Doctor’s understanding in some cases superior with the artificial Intelligence turned on to control an enumerable amount of variations, too complex for any human brain.
2. Allow the **Epigenology Clinic H&W Practice** to offer a new kind of Comparable Diagnosis service. Enhancing Medical Pros current patients & clients as a non-invasive H&W physical exam.
3. Help with Doctors patient work load and reduce Emergency Hospital visits.

To handle the **Hand & Wrist Practice** workload this type of medical technology would allow people with a higher than grade 12 even academics to generate **Epigenology Clinic H&W-Practices** in a home or clinic environment on a global scale, Why keep it in Canada.

A “Epigenology Clinic H&W-Practices” would operate as follows:

1. Registered and Licensed **Epigenologist Hand & Wrist-Practitioners** Examinations can be conducted by a RNs, Nurse practitioners and any Medical Professional services. Including the general public that have a higher than grade 12 education.

2. It only takes about a 45 minute for a **Hand & Wrist exam** extracting Symptoms & Genetic Features with a corresponding Alphanumerical Exam Numbers. Recorded on patient/Client's worksheets, then they are entered into a computer Database. The AI then controls an enumerable amount of variations the effect symptoms have on another. Generating a medical report any medical professional could understand.
3. These encrypted reports are then forwarded to the doctor/medical assistant that requested the examination or **Epigenologist Hand & Wrist-Practitioner's** clients on a global scale using the internet.
4. **Epigenologist Hand & Wrist-Practice** reports are engineered to assist medical diagnosis as comparison diagnostics only. At this point we must communicate with Doctors on the steps for this procedure. Most likely the Doctor would review the computer report prior to examining the patient.

A Epigenology Clinic Hand & Wrist Practice Examination would be of interest to

1. Individuals and families without a doctor.
2. Workers Safety Insurance Board
3. Commercial drivers license (explain why/how)
4. Insurance companies (how/why)
5. Disability insurance companies (how/why)
6. Individuals and families traveling internationally
7. Alternate medical professionals that could use non-invasive physical exams as starting point to treat their clients

The **Ontario College of Physicians and Surgeons** recommends the retired community have a **Geriatric hand & wrist assessment**. But the **Doctor shortage and growing population** has thinned out our Doctors. Hence ZioTECH Inc feels that a new computerized "**Preemptive Health Care**" (PHC) Service in the form of "**Epigenology Clinic Hand & Wrist Practice**" would be a better solution.

Here are some excerpts from a **Hand & Wrist examination procedures: such as:** (Lines of Beau, Koilonychia, mental water drop test, endocrine abnormalities, Raynaud's disease, Palmar erythema, thyroid disorders and vitamin B12 deficiency, Rheumatoid, neuritis, lung cancer, Paronychias, Pseudomonas paronychia, Marfan's syndrome, fibrosis of the palmar tendons, Amyotrophic lateral sclerosis, to name a few).

To a request further data such as a White Paper, a description of our research and methodology must come from serious enquiries only.

looking forward to discussing this opportunity with any medical pros.

Sincerely,
